-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 July 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-19 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-19 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1 and 11 filed 07/28/2005 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 5-6, 8-11, 14-15, and 18-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hollenberg (US 6,091,956) in view of Walsh (US 6,144,848).

Re claims 1-3, 5-6, 8-11, 14-15, and 18-19, Hollenberg teaches a console processing unit (figs 1 and 2, and alternate embodiment figs. 4-16) for goods inventory management coupled via the internet (30a of fig. 1) to at least one fixed detector (32a of fig. 1) and at least one mobile sensor (2c, 9i of fig. 4, see also fig. 9, e.g. the telephone is mobile) a data structure for representing a monitored object, the data structure comprising an object identifier (2b of fig. 4) representing one or more goods in production, inventory (6h, 6i, 3e.... of fig. 4); a first object location and a time monitored such at location (32a-32c of fig. 1) provided by a detector (a detector is the transceiver A) coupled to the console-processing unit (2b of fig. 4) a second

Art Unit: 2613

object location and a time monitored at such location (14k of fig. 6), provided by a sensor (camera, 9m of fig. 9) coupled to the console-processing unit.

It is noted that Hollenberg does not particularly disclose identifying shipment and access means processes data structure securely using a digital certificate, watermark or encryption key, such that is accessible for object-monitoring only one or more specified network site or processor as claimed.

However, Walsh teaches an order processing element (11 of fig. 1, note The order processing element 111 includes memory locations for inventory, user information, delivery schedules, accounting information and the like, wherein the assigned memory locations in order processing element 111 may include e.g. user profiles such as account numbers, user device numbers and authentication codes and language preference (e.g., Spanish, English or Russian and the like) and includes e.g. prior ordering history; inventories of goods or services that can be ordered; delivery schedules (shipment schedules); and invoice, billing and collection histories) for identifying shipment and access means (120 of fig. 1, note the user device is highly versatile and provides simple, rapid, secure and encrypted, self-correcting, error-free, inexpensive, handheld unit to access, control, instruct, command, and query a host server) processes data structure securely using a digital certificate, watermark or encryption key (wherein the host server (110 of fig. 1) and the handheld device (120 of fig. 1) provide a method for establishing a bi-directional, secured, confidential, private and error-free telecommunication path to a host server and for commanding the host server along that communication path to encode, encrypt and transmit sensitive information in a secure manner to a host handheld low power user device), such that is accessible for object-monitoring only one or more specified network site

Art Unit: 2613

("Multimedia presentation" is intended to mean that the host server may be accessed using the user device and method of the invention) or processor (110 of fig. 1).

Therefore, taking the combined teachings of Hollenberg and Walsh as a whole, it would have been obvious to one of ordinary skill in the art to incorporate the teachings of Walsh into the system of Hollenberg for the same purpose of accessing the server or host computer with the secured message to inventory goods of production and schedule the delivery or shipment to the client or user.

Doing so would provide the processing unit for securing confidential information such as credit card numbers, account balance information, and encryption parameters, (i.e., from thieves) by storing the subject information in a protected memory in the subject user device.

Moreover, Hollenberg further teaches a position signal (GPS) being generated by the detector (32d of fig. 3) coupled to the monitored object (mobile device 2b of fig. 4 is held by a user) when such object is moveable within an observable range (the camera 9m detects the image of the user is moveable within a distance from the cell phone called an observation range), a schedule object location and a time schedule for such location (GPS system has a function to schedule location and the computer (2b of fig. 4) schedules time for that location); a visual signal being generated by the sensor uncoupled to such object in the observable range (9m of fig. 9, e.g. the camera generates the video image of the user).

Additionally, Hollenberg teaches the CPU (2b) has a software agent associated with the monitored object accesses a database (6h, 6i of fig. 3, 6n 8d of fig. 6, e.g. map), the object identifier (2b of fig. 4) comprises an object name, an object group, an object query, an object condition, an object status, an object location, an object time, an object error, or an object image,

Art Unit: 2613

video, or audio broadcast signal (the map is displayed on the screen and includes name of street); the monitored object is monitored temporarily using an extrapolated or last-stored positional or visual signal (last-stored positional in the memory for simulating with the current traffic (6m of fig. 6)); the monitored object is provided an electronic file comprising a book, a greeting card, a news report a sports, a stock report, an artwork, a research database, a personal list, a recorded or live voice or music transmission, an electronic tool, or a commercial transaction (6p, 6q of fig. 6), the observation range is modifiable according to a rule set (col. 10, 18-43), and the monitored object is authenticated according to a voice pattern, a finger-print, pattern, a handwritten signature, or a magnetic or smart-card signal (using email, col. 10); the detector comprises visual-analyzer means for recognizing adaptively the identified goods (the user send the request (identified goods) to buy a product or item to the detector (32b of fig. 1)) using a neural network or simulation program, thereby enabling secure inventory of the identified goods (on-line buying items cols. 9 and 10); the user also checks in-stock of the identified goods for transaction shipment and a tax-rate (price of each stores and tax rate are also included) at the location (the store location) of the identified goods.

1. Claims 4 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hollenberg (US 6,091,956) in view of Walsh (US 6,144,848) as applied to claims 1 and 3, and further in view of Kennedy, III et al. (US 6,301,480).

Re claims 4 and 7, the combination of Hollenberg and Walsh further teaches and suggests the communication unit (36a of fig. 1) of Hollenberg associated with the remote device that is detected by the first detector for observing the user when such remote user is movable within an

Art Unit: 2613

observable range (9m of fig. 9) but the combination of Hollenberg and Walsh does not particularly teach a mobile communication unit comprises an accelerometer, and a modification according a rule set as claimed.

However, Kennedy teaches a mobile communication unit (12 of fig. 1) comprises an accelerometer and personal health sensor, and modification according a rule set (col. 3, lines 5-19).

Therefore, taking the combined teachings of Hollenberg, Walsh, and Kennedy as a whole, it would have been obvious to one of ordinary skill in the art to incorporate the teachings of Kennedy into the combination system of Hollenberg and Walsh for the same purpose of communicating between the remote buyer and central station fast and more accuracy.

Doing so would provide the advantages of the system include the adaptation of the system to provide mobile units are associated with cars, trucks, boats, barges, airplanes, cargo holders, persons or other mobile items such as ambulance vehicle that desire a selection of services that include emergency services, roadside assistance, information services (e.g., directions, news and weather reports, financial quotes, etc.), or other as suggested by Kennedy.

2. Claims 12 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hollenberg (US 6,091,956) in view of Walsh (US 6,144,848) as applied to claim 11, in view of Clare (US 5,745,036).

Re claims 12 and 16, the combination of Hollenberg and Walsh teaches the sensor for sensing the image of the user but not the detector is a camera for observing such identified goods as claimed.

Art Unit: 2613

However, Clare teaches the cameras (58, 58' of fig. 1) for observing the identified goods. Therefore, taking the combined teachings of Hollenberg, Walsh, and Clare as a whole, it would have been obvious to one of ordinary skill in the art to incorporate the teachings of Clare into the combination system of Hollenberg and Walsh for the same purpose of detecting the image of the identified goods.

Doing so would allow the system to easily identify which product have been picked up at the remote location.

3. Claims 13 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hollenberg (US 6,091,956) in view of Walsh (US 6,144,848) as applied to claims 1 and 11, in view of Forlenzo et al. (US 6,377,821).

Re claims 13 and 17, the combination of Hollenberg and Walsh does not particularly teach or suggest low-power indicator as claimed.

However, Forlenzo teaches a "low battery" indicator in the display (20) will only be visible to the user when the low battery condition is present.

Therefore, taking the teachings of Hollenberg, Walsh, and Forlenzo as a whole, it would have been obvious to one of ordinary skill in the art to incorporate the teachings of Forlenzo into the system of Hollenberg and Walsh for the same purpose of indicating the battery is low. Doing so would allow the user to recharge or change the battery so that the system would keep all stored information.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

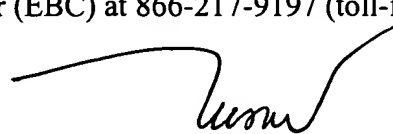

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tung Vo whose telephone number is 571-272-7340. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mehrdad Dastouri can be reached on 571-272-7418. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
